

## eduroam roaming setting on ASIA-WIFI

### Android 11 or above Setting steps

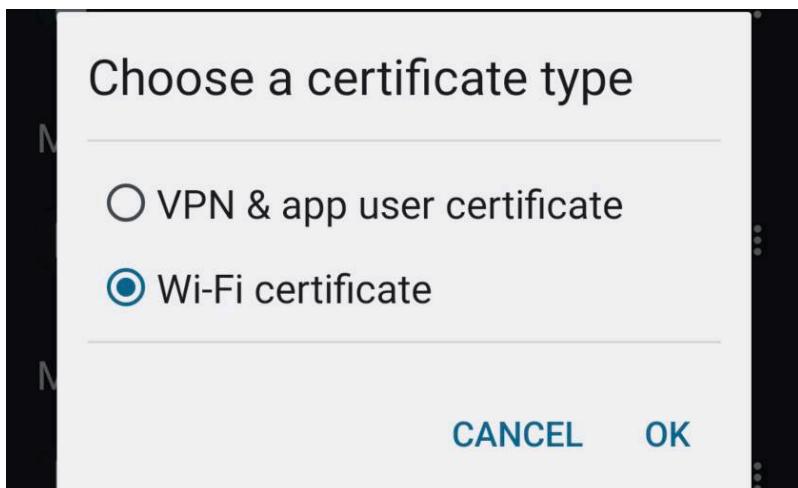

1. Since the security verification from Android 11 requires the use of a certificate, the corresponding certificate must be installed on the device before setting.

File download of certificate [auwifi\\_ca.p12](#)

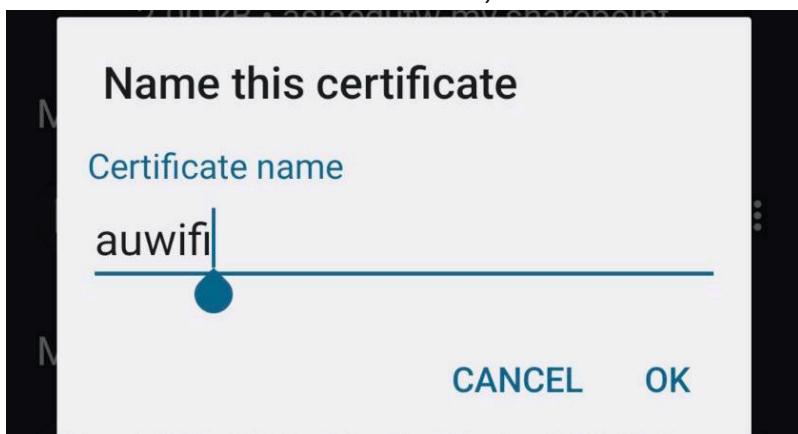

2. Install the certificate, the Extract certificate password is asiawifi

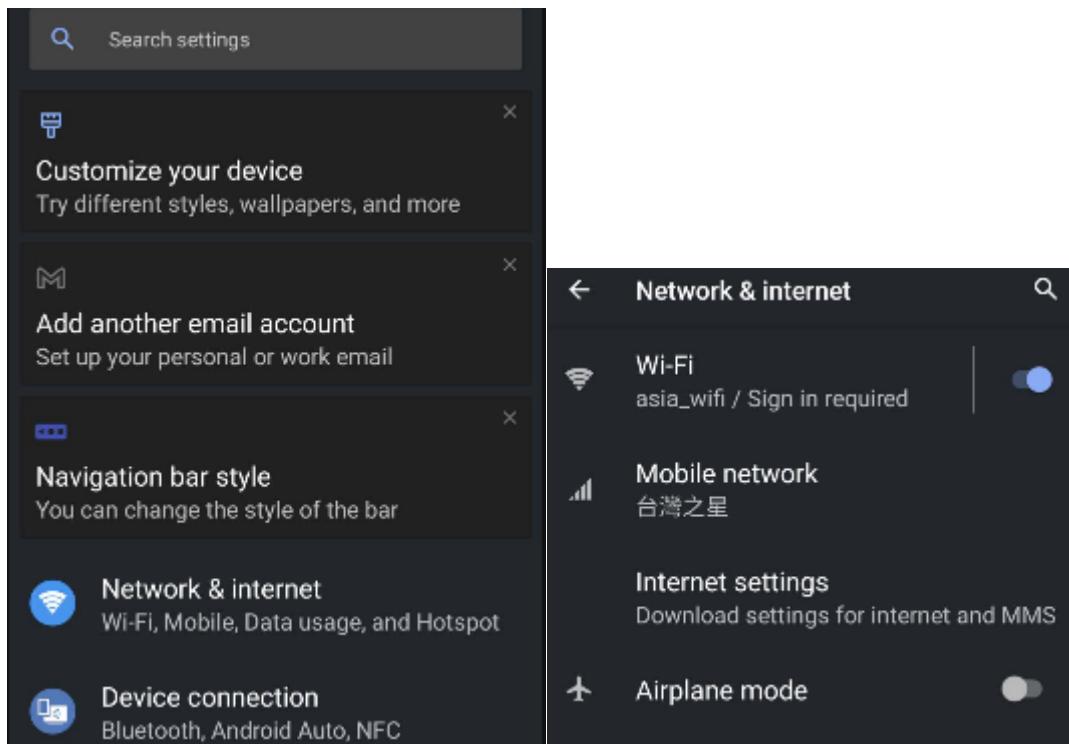

3. Choose a certificate type as Wi-fi certificate.

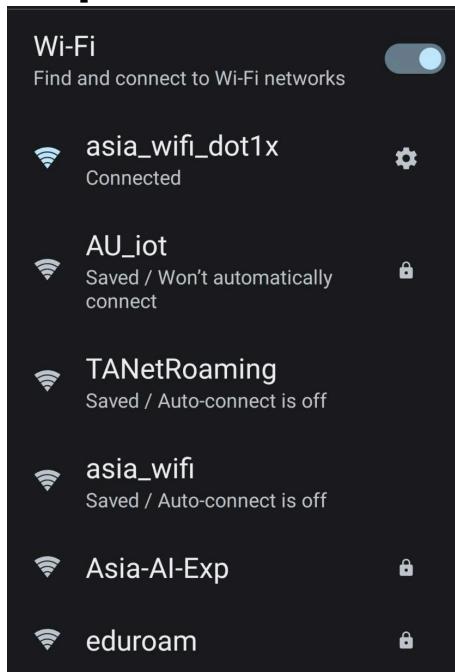

4. You can name this certificate, like auwifi.

5. Goto **[Settings]**, then select item **[Network & internet]**, then select **[Wi-Fi]**.

2. Press SSID **eduroam** at **[Wi-Fi]** frame.

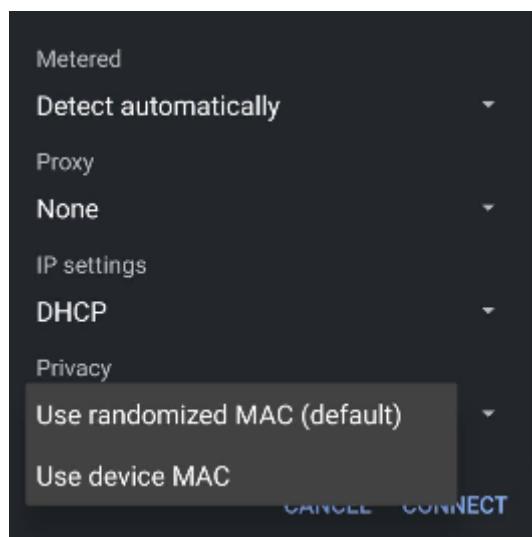

3. Select or Input fallow information , then press **[CONNECT]**,

or set **[Advanced options]**. (for Android 10 later)

<b>EAP Method</b>	PEAP	EAP method
<b>Phase 2 authentication</b>	MSCHAPV2	Phase 2 authentication
<b>CA certificate</b>	Use the certifcate installed on the system. This time named auwifi	CA certificate auwifi
<b>Online Certificate Status</b>	Request certificate status	Online Certificate Status Request certificate status
<b>Domain</b>	asia.edu.tw	Domain asia.edu.tw
<b>Identity</b>	Enter your roaming account  The roaming account of Asia University users is the email address <full address>	Identity  Anonymous identity
<b>Password</b>	This account's password	Password (unchanged)

4. The item set in **[Privacy]** is changed to use device MAC

※When using a random MAC, the system will automatically change the MAC from time to time.  
When the MAC is changed, re-authentication is required. During the re-authentication period, it will feel like a network interruption.

5. After the setup is complete, you can choose SSID **[eduroam]** to connect.
