

Operating instructions for the VPN client's connection software (Pulse Secure)

Linux (CentOS)

1. Launch the app after downloading and installing Pulse Secure

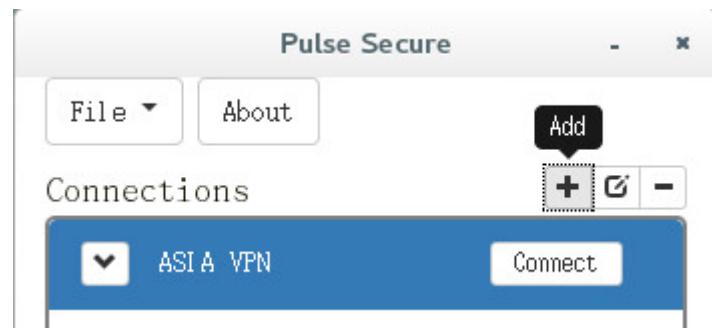

2. Press  button to add a connection

3. Type the connection name (customizable) and the VPN server <https://asiavpn.twaren.net>

4. Press  button

5. After the addition is complete, in the list of connections, there will be a connection setting.

6. Press **Connect**

7. When the software pops up to enter the "User Name" and "Password" screen, please enter your "Campus Portal" account and password.

8. After the connection is completed, the status of the connection list will change to Connected.

Please disconnect after use.
